Passionate about problem-solving and continuously learning new technologies.

education

Bachelor's Degree in Computer Science | University of Turin | 2017

main skills

full-stack development	automation testing
communication skills	agile development
problem-solving	scrum framework
web frameworks	TDD
project management	

technologies

⭐⭐⭐⭐   ⭐⭐⭐   ⭐⭐   ⭐

JavaScript	VueJS	AWS	React-Native
TypeScript	Python	CI/CD tools	Angular
ReactJS	NestJS	Docker	Java
NextJS			

certifications

Contentful Certified Professional
Contentful | May, 2024

working experience

full-stack developer at etiqa

Full Time | Turin, Italy

[June 2018] - [Present]

During my time at Etiqa, I was part of the team that developed the company's website and the QAsimodo app, an in-house testing tool. Throughout these years, I worked on various internal projects and took on different roles in front-end and back-end development. I gained expertise in ReactJS, NodeJS, and Python, and also familiarized myself with DevOps principles for managing CI/CD pipelines. I was committed to expanding my knowledge of software development to enhance my performance. Additionally, I mentored junior developers, participated in pair and mob programming sessions, and collaborated with senior engineers to create training sessions for onboarding processes and client estimations.

- **Elty**

Elty, previously known as DaVinci, is an Italian company that develops digital products for the Italian healthcare industry. I had the privilege of contributing to the development of their latest product, Elty.it, for about 2 years. This public booking platform is designed to simplify and streamline the process of scheduling private specialist visits for end users. I worked closely with the entire team to design, develop, and continuously improve the product to meet the company's high standards and user expectations. The application was built using ReactJS (with NextJS) and NestJS with GraphQL and MongoDB, and it required effective communication and strong teamwork with different teams.

- **Mahana Therapeutics**

Mahana Therapeutics is a US-based company that specializes in developing digital treatments for individuals with chronic health conditions. I worked with them for over a year, assisting their team during the development and maintenance phases of their initial web product. The front end was built with ReactJS, while the back end utilized NestJS with GraphQL and Postgres. Additionally, I created automated end-to-end scripts for testing purposes.

After that, I assisted with the development of their current company website, which was built and maintained using the Webflow CMS. I also established an editorial workflow to support their marketing team's blog activities, leveraging NestJS and the Contentful CMS.

- **Protecht, Inc.**

Protecht is a US-based technology company that offers insurance technology products. These products help protect customers attending live events, assist ticketing platforms, and provide fraud prevention tools. I assisted their team in standardizing their development and QA processes, and I helped them develop new features for their products using ReactJS, VueJS, and Python.

- **Jazz Pharmaceutical**

Jazz Pharmaceuticals is a US biopharmaceutical company. We developed the current MoreThanTired website using ReactJS and NodeJS to pre-render some static pages.

java developer at <u>Gruppo SCAI Finance</u>

Full Time | Turin, Italy

[November 2017] - [May 2018]

During my experience in Gruppo SCAI Finance, I gained a foundational understanding of web development, with a focus on Java and essential programming principles. Following a training period, I worked as a consultant for a few months, during which I started to familiarize myself with the banking and finance industry.

- **Intesa Sanpaolo**

The MPAD0 application, developed by Gruppo SCAI, facilitates on-site digital document signing for customers. Specifically designed for tablet use, this application enables bank brokers to present the bank's financial offerings to customers. As an established application, my responsibilities encompassed the maintenance and development of new products.
